

V2.1
Gears of War 3

Thank you for your purchase!

This is the ultimate modded controller. With over 9 unique features and 15 save-able empty slots. The Gears of War 3 controller comes preloaded with all the best mod features, allowing the gamer to place them in the most ideal slots. There is no controller on the market capable of this technology.

Operation is a breeze after understanding all the great advantages this controller offers. From an operation standpoint, the customization allows you to game normally, but with the upper hand! Make sure to read the instructions thoroughly before playing to maximize your gaming experience.

First, let's understand the terminology we will be using in the instructions:

Legend:

LT/RT = Left or Right Trigger

LB/RB = Left or Right Bumper

LS/RS = Left or Right Thumb-stick Click

Back Button = Button left of the center Guide Button

D = Directional Pad

LED = 3rd & 4th player LEDs will illuminate to navigate controller

General Mod Info and Operation:

This controller features 15 different "save-able" slots, with the first 10 containing preset rapid fire rates. The concept of the slot is a blank mode on the controller, that the user can then turn on any mod function desired and then save. It allows you to make your own rapid fire to save in any slot and allows you to toggle on/off any individual mod feature. Any *imitation* Evil Controller on the market would require you to continually cycle through game modes, to preset mod layouts, ultimately determining how you play the game. Our controller gives you the reins to toggle on any feature within any slot, over-writable and save-able as many times as you want.

Before we jump into the operation and the Game Mod features of your controller, let's go over the basic default way your controller will arrive. Your first 10 slots have our professionally tuned rapid fire for all of your favorite games. These rates are over-writable.

1. Modern Warfare 3 Rapid Fire
2. Battlefield 3 Rapid Fire
3. Gears of War 3 Rapid Fire
4. Black Ops, COD4 Rapid Fire
5. World at War Rapid Fire
6. Modern Warfare 2 Rapid Fire
7. Medal of Honor, Burst Fire
8. 8 Shots per second Rapid Fire
9. 9 Shots per second Rapid Fire
10. Halo 3, Rainbow Six Vegas 2, Left 4 Dead 1 & 2, GTA IV, 10 Shots per second Rapid Fire

These rates of fire are purely there for you to use immediately or you can start making your own rapid fire. It is encouraged to use the Adjustable Rapid Fire feature as it will maximize your favorite weapons! As mentioned above, customize your slots to your liking and overwrite them as many times as you want. With this controller you can default a slot to any tuned Rapid Fire rate from the game mode list above.

To assign a game mod function to a slot, simply select the slot first and then toggle the features on.

When selecting slots or features, press and **hold** the Dpad while **tapping** the slot/feature. Upon releasing the LED indicator will let you know it is toggled on. This is how all of the mods toggle on/off for the most part.

i.e. Hold Dpad Right and Tap X the proper # of times

To change slots:

DRight + X (#) amount of times= Slot selection

- There are 15 different blank save-able slots
- Each slot can store any feature the user desires, custom to your liking
- LED – 4th flashes every time X is pressed
- To Save your slot:
 - Switch slots or toggle the mod on/off. Removing batteries before doing so will forget that specific slot.

To toggle off/on:

DRight + Y = Quick Mod Off/On

- LED – 4th toggles off
 - **GOW3 Toggles on/off differently than just normal slots. Directions further down.**

To check slots:

Back + X = Slot selection indicator

- This features is for when you forget what slot you're in
- This flashes the LEDs in sequences of 5, followed by individual flashes if necessary
- LED – 4th flashes your slot #

To default slot to Preset Rapid Fire:

HOLD + HOLD

Back + RT = Enter Game Mode Selection

- LED – 3rd and 4th flashes briefly
- You must have a slot selected and no mods on besides rapid fire
- Make sure to continue *holding* the back button, upon releasing the RT for the next step
- This isn't a required feature to use, only if you prefer to use our rates over or in addition to your custom made rates.

HOLD + TAP

Back + X (#) amount of times = Select Game Rapid Fire Mode

- Refer to the list at the middle of this page for the proper #
- Once performed, let go and your preset will be selected for your slot.

To Master Reset:

- This will return your controller back to it original mod firmware from when you first received it. Do not do this unless you want to overwrite all of your slots rapid fire with the stock way it came. It will leave your features that are saved as is, only overwriting the rapid fire rates.
- First Toggle off the mod, but keep the controller on.
 - **HOLD + HOLD + HOLD**
 - **Back + LB + LS** for 7 seconds = Resets controllers mod firmware to stock
- Ideal for a fresh start
- LED – 3rd and 4th flashes briefly
-

Gears of War 3

Features Explained:

Features:

1. *Active Reload*
 - a. *Active Reload has many beneficial features such as:*
 - i. *Increases reload speed significantly*
 - ii. *Adds more damage to reloaded bullets*
 - iii. *Increases range of scorcher flame*
2. *Auto-Mark*
 - a. *When Left Trigger is pulled and aimed at an opponent, a mark will automatically occur.*
 - i. *This will place an indicator above your opponents location, giving your entire team an advantage as you will be able to track their location*
 - ii. *A lot of times, you will accidentally mark opponents indicating their position by just aiming in their direction!*
3. *Auto-Reload + Rapid Fire for both Hammerburst and Pistol*
 - a. *This feature allows the user to hold down Right Trigger for rapid fire, without having to be concerned about reloading before the clip empties.*
 - b. *This feature detects when the clip is emptied and automatically reloads for you by using a bullet counter. Refer to the FAQ for details.*

4. *Auto-Chainsaw*
 - a. *This will win you every single Lancer Chainsaw Duel Match*
 - b. *Press and hold Right Stick after initiating a duel to operate*
5. *Sawed Off Auto-Swap*
 - a. *This feature switches your weapon after firing to your primary rifle*
 - b. *The reload is so long with the Sawed Off, you're better off using the rifle immediately after firing.*
 - c. *When you go back to your shotgun, it will automatically Active Reload for you.*
6. *Auto-Revive*
 - a. *This feature will rapidly press A for you, to revive yourself.*
 - b. *When downed, toggle the mod on and it will rapidly press A to get yourself up as quickly as possible.*
 - c. *Does not work to revive teammates as that is done with the X button.*
7. *Save-able individual weapon slots*
 - a. *Each active reload can be assigned to individual D-pad buttons, making operation just as easy as playing.*

GOW3 General Mod Instructions:

This Gears Controller is very advanced, but do not be intimidated, as once you understand its operation it will be very simple to operate. Once you toggle on and assign your features, you just play the game as you normally would!

HOLD + TAP

Back Button + RB = Mod on/off

- LED –
 - On - Both 3rd and 4th illuminate momentarily
 - Off - 4th flashes

DUp + LB = Auto-Mark on

- LED –
 - On/off- 3rd and 4th flash, 3rd coming first

Back + A = Auto-Revive

- LED –
 - On- 3rd and 4th flash repeatedly
 - To toggle mod off, press either Thumb-stick in, triggers, B, or RB.

Dpad Direction + X = Clears weapon slot to blank

- LED –
 - On/Off - Illuminated with quick flicker

GOW3 Operation:

Every weapon has different reload times and locations on the Dpad, so we must assign the proper weapon depending on what you're using. With this controller, you can actually assign a weapon to any dpad direction allowing you to play as normal.

To do so, you press **Dpad Direction + LB (#)** amount of times to match the diagram below.

Active Reload Layout

HOLD + TAP

Dpad Direction + LB (#) of times = Weapon selection

Dpad Direction + Y (#) of times = Special Weapon selection

LED –

This mode comes default blank, allowing you to customize it anytime.

When DLeft selected, 3rd is illuminated.

When DRight, 4th is illuminated.

When DDown is used both 3rd and 4th stay illuminated

When Dup, it clears all LEDs

HOLD + TAP

DLeft + LB

1x Gnasher

2x Sawed Off
3x Sawed Off Auto-Swap

DRight + LB

1x Lancer
2x Retro Lancer
3x Hammerburst *Casual*
4x Hammerburst *Ranked / Private / Horde*
5x Gnasher Hardcore

DDown + LB

1x Snub Pistol Auto-Reload & Rapid Fire
2x Snub/Boltok Pistol
3x Gorgon Pistol
4x Snub Pistol *Hardcore*

DLeft or Right + Y

1x Boom
2x Digger
3x Torque Bow
4x Scorcher
5x Longshot
6x One Shot*

*One Shot slot selection should be done before picking up the weapon, otherwise it will drop to the floor. The controller will however remember what your previous weapon setting was after you drop the one shot and push the proper dpad direction.

** If desired, you can actually cancel an Active Reload by pressing LB. Ideal if you know a reload will fail or it was initiated accidentally.

Example:

Your match starts with a Sawed Off, Lancer, and Snub Pistol. You would press:

DLeft + LB

2x Sawed Off

DRight + LB

2x Retro Lancer

DDown + LB

1x Snub Pistol

It will now remember each directions active reload, so you can switch back and forth between weapons without having to change modes. If you were to pick up a weapon, you would simply select **Dpad + LB** (or **Y** if special weapon) to match the diagram.

Adjustable Rapid Fire:

DUp + RT = Adjustable Rapid Fire Mode

After toggled on, adjust with:

Dup / Ddown = Increase / decrease rate of fire

- Tap-Hold up / down to adjust the rate
- LED - Flashes the rate of fire

DLeft / DRight = Decrease / Increase pulse width

- Tap left / right to adjust the pulse
- LED - Flashes when selecting

Back Button = Save

- LED - 3rd stays illuminated

- Try out your rate of fire at anytime with RT in games and once you are satisfied, simply save it. *This feature is very sensitive, so take time fine tuning your weapon. In some instances, it is actually better to reduce the rate of fire, rather than increase to improve speed.*

Adjustable Rapid Fire

- Allows you to create your own rate of fire on any weapon with precision. With the addition of the "pulse" feature, it maximizes your customizing ability.
 - Adjusts rate of fire
 - 15,000+ increments of speed in total
 - At times, it's possible for the rapid fire to be so fast that it doesn't register in the game. Try slowing it down at times.

3. *With such a wide range of increments, a small tap could mean a lot to your rate of fire.*
 4. *Try slowing automatic weapons down to reduce recoil and increase accuracy.*
 - ii. *Adjusts pulse width between the rate of fire for extreme precision.*
 1. 15 increments in total, 7 left 7 right and starting rate
 - a. *If you lose track where you are, simply max out one side and count backwards*
 2. *The pulse adjusting allows you to fine tune weapons like no other rapid fire controller.*
 - a. *To understand the concept of the pulse width, imagine this:*
 - i. *Rapid Fire is essentially RTRTRTRTRTRTRTRT in a repeating pattern*
 - ii. *Pulse width allows you to adjust the distance, between each RT pull. So you could for example do:*
 1. *RT RT RT RT RT RT*
 2. *RT RT RT RT RT RT*
 3. *Or even so fast RTRT don't even register at times in the game.*
 3. *Pulse is a great feature to use, but isn't always necessary. First find the rate you like and then adjust the pulse width from there.*
 - iii. *Test your rate as you adjust the controller with the Right Trigger before saving the rate.*
-

FAQ:

Q: My controller was working great, but now it isn't operating properly.

A: Make sure you have brand new AA batteries in your controller as power is usually the issue. Avoid using rechargeable battery packs as the battery strength depletes faster than Alkaline AA batteries.

Q: My controllers rapid fire isn't working properly, sometimes firing on its own or not allowing me to adjust the rate easily.

A: Make sure you have your rumble motors disabled in the game settings. This current version may not support rumble motors in certain games due to voltage spikes, which cause your rapid fire timing to be off.

Q: Does this controller work in other shooter games?

A: Yes! It works in every shooter game out there. With the ability to adjust any weapons rate of fire precisely, you'll never need another controller for any game.

Q: Can I use my rechargeable battery pack on my modded controller?

A: Yes, BUT it is not recommended. These batteries hold very little power and over time their capacity is reduced, making it more susceptible to malfunctioning.

Q: Does my controller have an included warranty?

A: Yes, your controller has an included 30 day parts and labor. If any issues arise with the functionality of your mod, we will fix it at no extra cost.

Q: Is my controller undetectable?

A: Yes, your controller is 100% undetectable and legal to use.

Q: How can I contact you?

A: You may contact us at 1-877-880-EVIL(3845) or via e-mail at info@evilcontrollers.com

Gears of War 3:

Q: My Hammerburst and/or Pistol reload timing is way off.

A: Make sure your "bullet counter" is set properly. With these two weapons, you have an auto reload feature which counts how many bullets you fire before reloading. If you were to say die while firing a clip, the counter doesn't realize it and reloads sooner than expected. To reset the counter, simply perform an Active Reload and the counter will reset. If you switch back to an unloaded clip rather than dying, the weapon will need to be actively reloaded to reset timer (specific to hammerburst)

Q: I know active reload is in the right mode, but sometimes it misses still.

A: Make sure you are not "rolling" or performing an action when trying to reload. If you are still finishing an action in the game and you initiate the macro before the initial action is complete, it will offset the timing just enough to give you a failed reload. Also note that if you are behind a wall and you have to reach around to fire, it may offset the timing and cause a failed reload.

Q: My controller isn't saving my GOW3 mode.

A: Since GOW3 always has different loadouts, it doesn't save to a specific slot. Simply select your slot and toggle it on.
