FOR XBOX 360 ®

QUICK START GUIDE

W — WELCOME

WELCOME TO THE EVIL FAMILY

You are now the proud owner of an Evil Controller!

The Quickstart Guide will assist you in using your modded controller right out of the box.

To maximize your playing potential, please go to **evilcontrollers.com** for advanced functions, save slot instructions and additional mods.
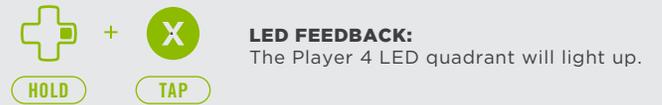

™

1 — RAPID FIRE

Using an online shooter game like Call of Duty or Battlefield 4, create a local game with no enemies.

Next, select a load-out in the game that includes a semiautomatic weapon. (pistols work well).

Once in the game, take a few shots with your semiautomatic weapon. Then input this command:

[D-PAD] **HOLD** + **X** **TAP**

LED FEEDBACK:
The Player 4 LED quadrant will light up.

Rapid Fire is now active and your semiautomatic weapon will fire automatically.
(To adjust your rate of fire please refer to Adjustable Rate of Fire in the advanced instructions.)

Now Hold down the Right Trigger and you will notice the increased rate of fire.

2 — ACTIVATE DROP SHOT

Default button layout:

[D-PAD] **HOLD** + **B** **TAP**

Tactical button layout:

[D-PAD] **HOLD** + **RS** **CLICK**

LED FEEDBACK:
The Player 4 LED quadrant will blink.

Drop Shot is now active.

Each time you pull the trigger your character will go prone or will crouch (depending on the game) thus lowering your body and making you harder to hit.

To keep Drop Shot active you MUST stand up using the A button. Standing up with B button will deactivate this feature temporarily.

In order to reactivate drop shot, just press the A button at any time in game.

Quick Reminder **Default** Layout:

Press **A** to stand up and keep Drop Shot active.
Press **B** to stand up and deactivate Drop Shot.

Quick Reminder **Tactical** Layout:

Press **A** to stand up and keep Drop Shot active.
Press **RS** to stand up and deactivate Drop Shot.

Congratulations! You now have the two deadliest mods activated!
Setup a private match with some enemies and try out your new skills!

3 — DISABLING AND ENABLING MODS

QUICK TOGGLE: Turning Mods on and off.

[D-PAD] **HOLD** + **Y** **TAP**

Please Note:
If you turn the controller off and the mods are active, it will remember the mods you had activated and they will stay active when you turn your controller back on.

CLEAR ALL MOD
If at any time you need to wipe your mods from your controller (helpful in troubleshooting your controller) follow these instructions. Rapid Fire will stay enabled.

The Master Mod MUST be active first:

[D-PAD] **HOLD** + **B** **TAP**

4 — ADDING ADDITIONAL MODS

After you have mastered Rapid Fire and Drop Shot (including standing up while keeping the mod active) you should add additional mods. The complete instructions can be found via our website:
evilcontrollers.com/instructions.html
